# Release Notes — Orbit Desktop 3.4.0

## Release Summary

Orbit Desktop 3.4.0 is now available, delivering a robust update focused on enhancing user productivity, refining system performance, and expanding integration capabilities. This release introduces new tools for file management, improves stability across platforms, and addresses critical bugs reported in previous versions. Key updates include a redesigned interface, enhanced security protocols, and compatibility improvements for modern operating systems.

### New Features

- **Enhanced File Management with Smart Tags**: Quickly categorize and search files using AI-driven tags based on content and metadata.
- **Cloud Sync Integration**: Directly sync files with Dropbox, Google Drive, and OneDrive from the desktop interface.
- **Customizable Workspace Layouts**: Rearrange panels and dockable widgets to suit individual workflow preferences.
- **Real-Time Collaboration Mode**: Enable multi-user editing and commenting on shared documents within the application.

### Improvements

- **Optimized File Operations**: Reduced load times for large datasets by 30% through improved caching mechanisms.
- **Redesigned UI for Accessibility**: Enhanced contrast ratios, larger touch targets, and keyboard navigation enhancements.
- **Stronger Encryption Protocols**: Upgraded AES-256 encryption for data at rest and in transit.
- **Cross-Platform Performance Boost**: Improved resource management on macOS and Linux systems.

### Bug Fixes

- Resolved a crash on startup when loading corrupted configuration files.
- Fixed incorrect file permission assignments during bulk uploads.
- Addressed a UI glitch causing overlapping panels in multi-monitor setups.
- Corrected an issue where cloud sync paused indefinitely after network interruptions.

### Known Issues

- **Compatibility**: Limited support for Windows 10 version 2004 and earlier.
- **UI Layout**: Minor alignment issues in the sidebar on high-DPI displays (resolved in 3.4.1).
- **Large File Transfers**: Potential delays when syncing files over 10GB via USB 2.0.

## Upgrade Notes

- **Recommended Upgrade Path**: All users are encouraged to upgrade from 3.3.x to 3.4.0 via the in-app updater or the official download page.
- **System Requirements**: Minimum 8GB RAM, 2GHz processor, and 500MB of free disk space.
- **Backup Recommendation**: Export critical data before upgrading to ensure compatibility with existing workflows.
- **Support**: For assistance, contact Orbit Support at support@orbitsoftware.com or refer to the updated FAQ section in the help documentation.

This release marks a significant step forward in Orbit Desktop's evolution, balancing innovation with reliability. Stay tuned for future updates!
